Attention: Ms. Debra J. Allen
Town Clerk

Subject: Upgrade I-View HVAC Controls
Postler & Jaeckle Proposal PP10698

Dear Debra

As it was discussed before your existing I-View control systems is a version 5.3 which is a basic Carrier control system to be able communicate and control the Carrier Equipment. The 5.3 version also does not allow back-up for the configuration program.

Your system can be upgraded to a version 6.5 which allows complete back-up of all control configurations for the existing equipment but also allows the boilers etc to be added to which would allow the boilers and the dampers to work in conjunction with each other. Although this would allow better control of your building, the most important part of this upgrade is the ability to back up the system in case of power surges or controller failures to have a CD to upload your facility configuration without regenerating from the beginning. The price for the upgrade and labor to install \$2,950.00

Appreciate the opportunity to bid and should you have any questions or wish to discuss this further please contact the undersigned at 315-455-5587. Thanks and have a great day.

Sincerely,

Gary A. House
